

Claims

1. A polyoxymethylene composition having high fuel resistance, comprising:

100 parts by weight of polyoxymethylene polymer (A);

5 0.1-2.0 parts by weight of magnesium stearate (B); and

0.01-1.0 parts by weight of an antioxidant (C).

2. The polyoxymethylene composition according to claim 1, further comprising 0.01-2.0 parts by weight of a thermal
10 stabilizer (D).

3. The polyoxymethylene composition according to claim 1 or 2, further comprising 50 parts by weight or less of a reinforcing agent (E).
15

4. A shaped article, produced from the polyoxymethylene composition of claim 1 or 2.

5. A shaped article, produced from the polyoxymethylene
20 composition of claim 3.
